

# **Public opinion survey „Perception of the citizens regarding Moldova’s European integration process”**

**July 11, 2023  
Chisinau, Moldova**

# Research methodology

**Number of respondents:** 1120 people aged 18 and over;

**Sample:** stratified, probabilistic, bistadial;

**Survey type:** Face to-face (CAPI method)

**Representativeness:** the sample is representative for the adult population of Moldova, with a maximum error of  $\pm 2.5\%$

**Data collection period:** 13 - 28 June 2023. The questionnaire was available in Romanian and Russian, giving respondents the opportunity to choose either option.

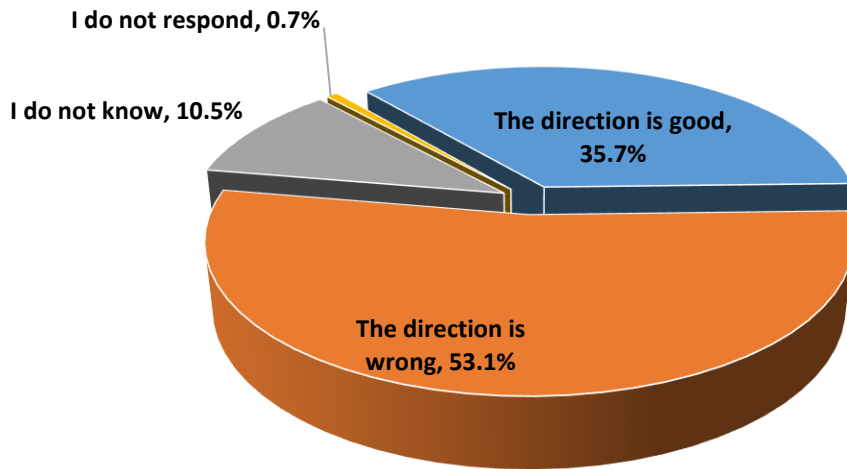

Following the analysis of the sample structure, the concordance between the distribution of the population known from the available statistical data and those obtained was confirmed, within the limits of the admissible statistical deviation. A difference was registered in the case of the gender structure, in the sense of the over-representation of women and by age groups, in the sense of the under-representation of young people (18-29 years). The main cause of these deviations is related to labor force migration phenomenon.

The presented results are weighted. The difference between weighted and unweighted results does not exceed 1.5% in any of the questions.

*Disclaimer: The survey was carried out by IPRE, in cooperation with CBS-AXA, within the project "Enhancing the Role of Think Tanks in Supporting the Moldova's European Integration Efforts #ThinkTanks4EUMembership," implemented by IPRE, with the support of the Open Society Foundations (OSF).*
